The room remains Matthew's.

A tactile, dark poker theatre that opens to the real Vegas sunset. Management requirements enter as production constraints, not a replacement visual language.

WORKING VISUAL BASE / Guy skeleton correction

PROPERTY A PRIMARY / GLAZING RETAINED

Owner sources preserved. Review package only; no build, procurement or external release approval.

One design lineage. Two distinct statuses.

The first room rendering supplies the material and ambient-light direction. The latest source-based skeleton correction supplies the working review image.

OWNER KEEP / original style lock

Black and purple drapery, charcoal carpet, navy seating, precise metal and a soft wall glow organize the room. The table is the primary event.

CURRENT REVIEW / restored specimens

The Guy source specimens and smooth display strips are retained. This still is a visual source, not proof of nine-seat fit, lens framing or structural dimensions.

Both images shown without design edits. Original source statuses remain unchanged.

Retain the real property.

Property A is the primary route. Existing glazing, the upper horizontal windows, pool and landscape remain architectural evidence.

OWNER SOURCE / real rear elevation

Keep the photographed mullion rhythm and straight pool. Survey the opening, upper shade line, terrace, door operation and clearances before a new matched render.

CURRENT REVIEW / rear scenic study

Carry the same drapery and quiet ambient light around the room. The transparent screen and blackout curtain are independent layers. Exact screen plane is an open reconciliation.

Rear concept is not a measured elevation; the actual photograph governs existing architecture.

The game holds. The environment changes.

Proposed cue sequence: stable faces, cards and chips; a controlled transition between actual daylight, sunset and the owner's night theatre.

DAY / site photograph

SUNSET / management reference only

NIGHT / owner working visual

DAY

Keep the view legible; manage the upper glazing separately. Compare transparent LED off and low output. Maintain a neutral game key.

SUNSET

Let the sky carry the transition. The middle reference expresses timing only: its altered pool, landscaping and side walls are not adopted.

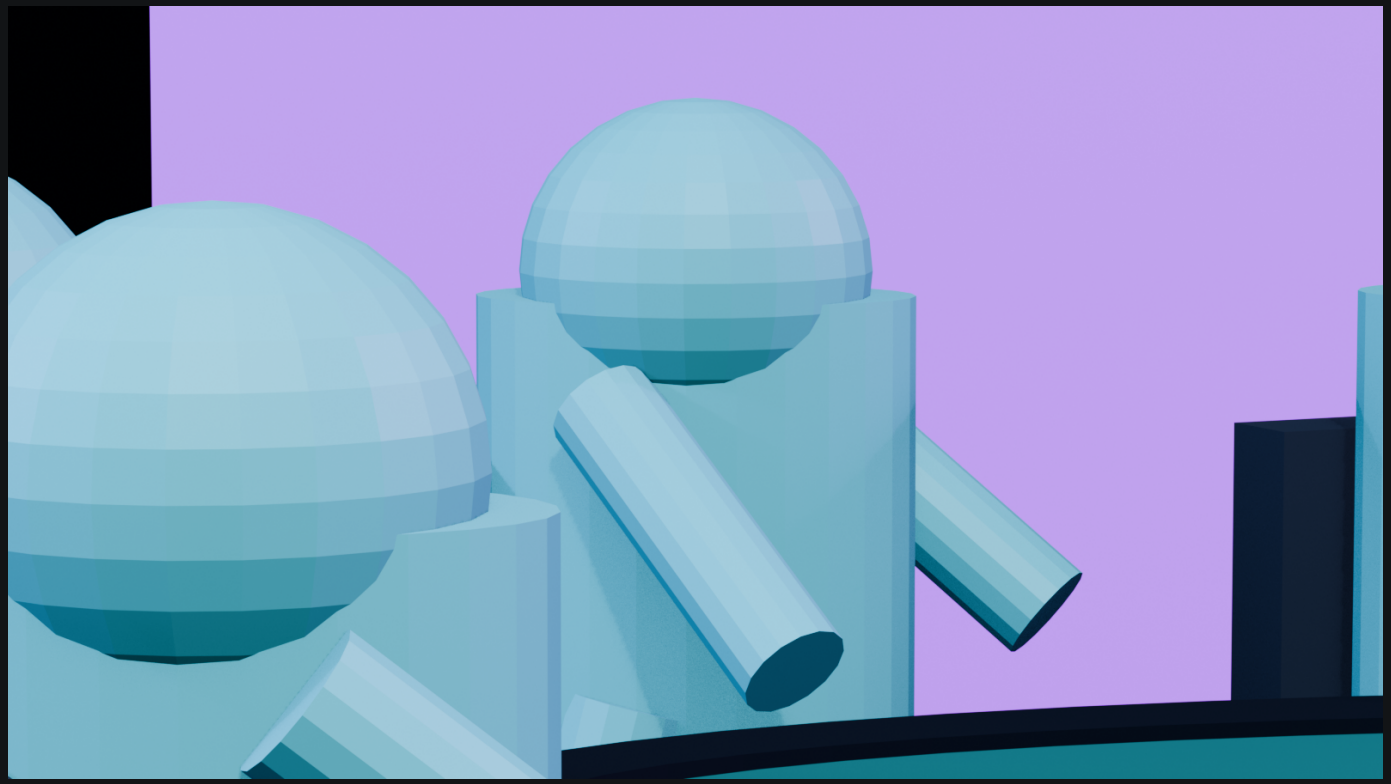

NIGHT

Return to the owner's curtains, charcoal materials and warm ambient depth. Use scenic motion sparingly. No automatic pool poles or neon spectacle.

Three source views, not a matched-camera exposure test. Lighting levels, cue durations and recorded performance remain TBC.

A player frame is a production test.

Four fixed FR7 positions carry eight individual presets. These supplied metric proxies test sightlines; they do not prove the final premium picture.

C1 > S3 / MODELED

Lens Z 1.70 m above original slab; 1.50 m above the proposed 0.20 m stage. Frame at target: 1.40 x 0.7875 m. Aim Z 1.22 m.

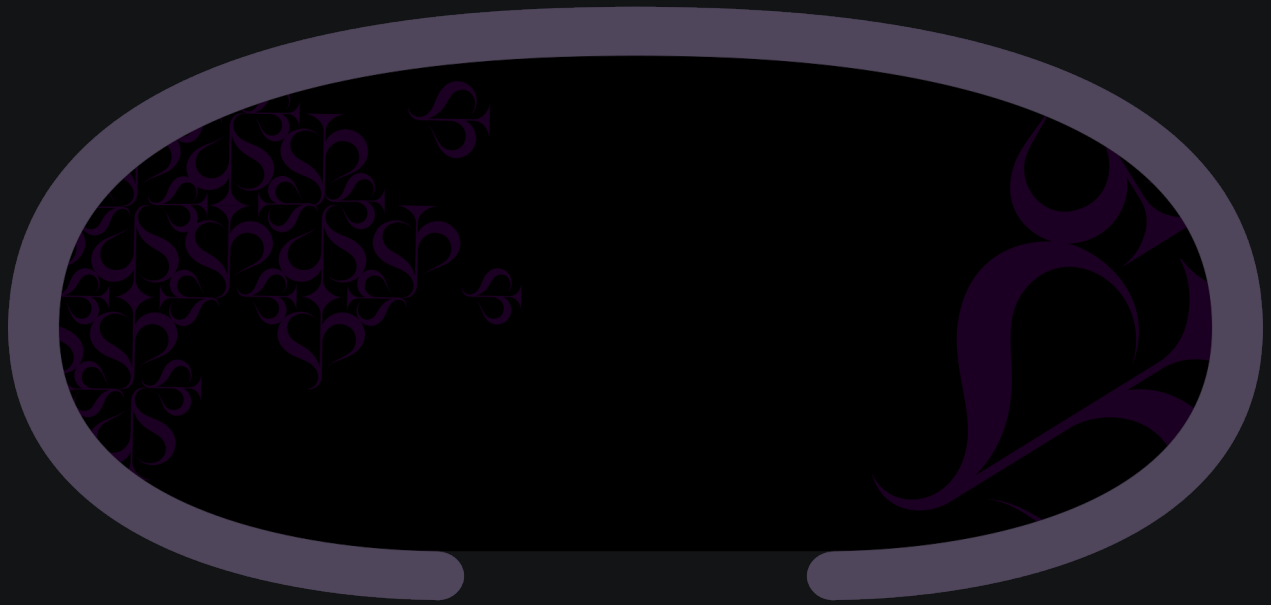

This is a modest downward angle, not a verified seated-eye datum. Confirm the real chair, posture, lens and sensor crop in the occupied test.

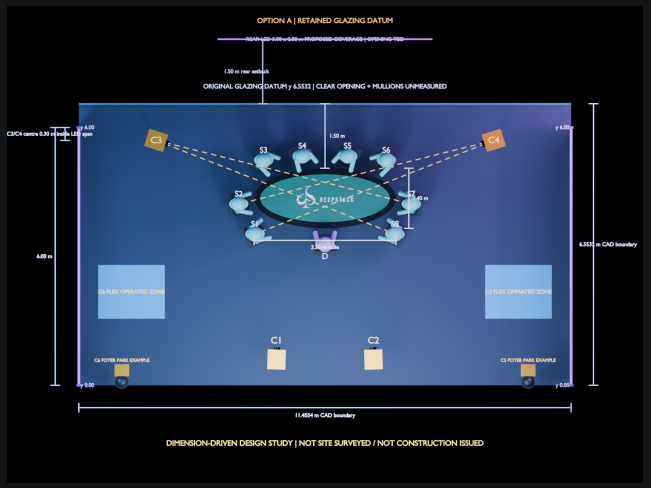

Eight independent presets; four cameras. C1 S3/S4, C2 S5/S6, C3 S7/S8, C4 S1/S2. Two operated FX6 and two overhead roles complete the baseline. Jib/gimbal bodies remain optional/TBC.

Camera coordinates belong to the V5 management study. Re-block against the selected owner table and actual room before adoption.

The table is protected source geometry.

The native owner felt and rail must not be stretched into a different table aspect ratio. Final Vegas artwork and fabrication geometry must be reconciled together.

OWNER-DERIVED NATIVE PLAN / preserved

Earlier owner room envelope: 3.00 x 1.50 m. Native source artwork has its own 2950 x 1475 mm labeled design envelope and a distinct actual rail extent. These are separate facts.

V5 / MODELED CONTEXT

3.30 x 1.40 m study. Eight player centers + one dealer. Overhead wide and tight XY roles exist; heights and complete camera kits are TBC.

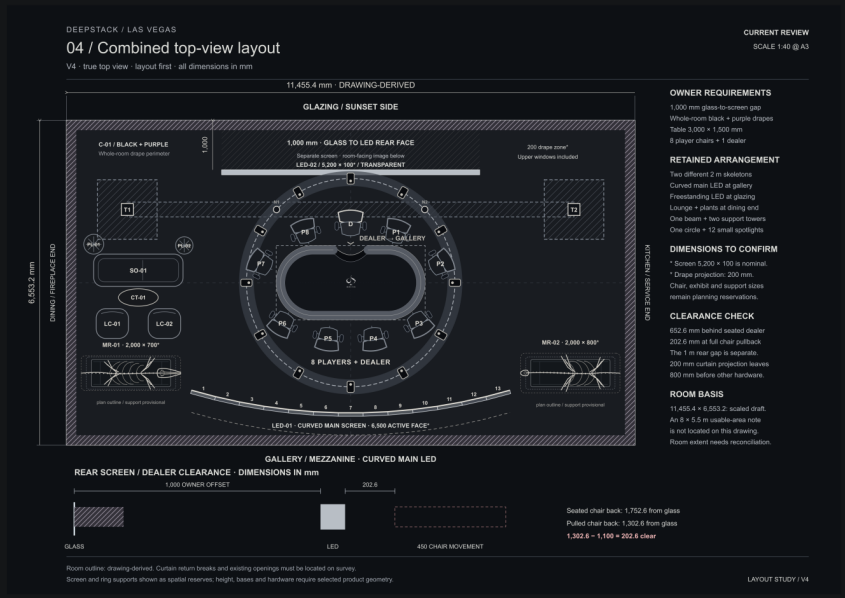

No clean Vegas felt/chip/card package is implied. Existing ambassador and Jeju artwork is not silently reused.

One visual baseline. Two geometry records.

Guy skeleton restoration controls the visual direction. Management constraints require reconciliation to that design.

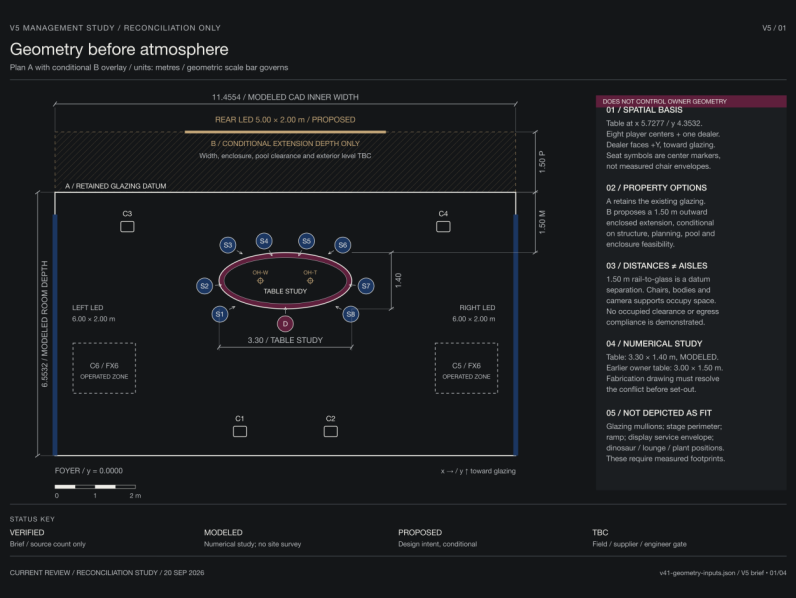

OWNER V4 WORKING LAYOUT

CURRENT REVIEW • unapproved arrangement; source preserved

V5 MANAGEMENT GEOMETRY

CURRENT REVIEW • numerical study; does not supersede owner design

CONFLICT / DECISION GATE	OWNER RECORD	MANAGEMENT RECORD
Table envelope	3.00 × 1.50 m; source-derived scoop	3.30 × 1.40 m; ellipse study / vendor CAD TBC
LED arrangement	One curved gallery LED + rear transparent LED	Two flat 6 × 2 m side runs + 5 × 2 m rear allowance
Rear screen / glass	1.00 m room-side offset to screen rear face	1.50 m beyond glass to proposed rear LED plane
Rig architecture	One straight beam / two towers + true circle	Foyer tower(s) → balcony support → table overhang
Fixture / height basis	12 ring spots in V4; later 10-light note unresolved	Fixture distribution + all support heights need engineering
Skeletons / scenic objects	Two 2.00 m skeletons; supports / widths provisional	Skeleton, lounge and scenic locations are not modeled
Dealer / camera orientation	V4 window-side dealer; Guy master appears gallery-side	Dealer faces glazing; fixed camera lanes use that orientation

HOLD POINT Neither record is a construction set-out. Reconcile table, dealer, screen planes and rig before a new controlled plan.

The original images above are embedded without cropping or alteration; sheet previews are not shown at a common metric scale.

VERIFIED
Brief / owner requirements

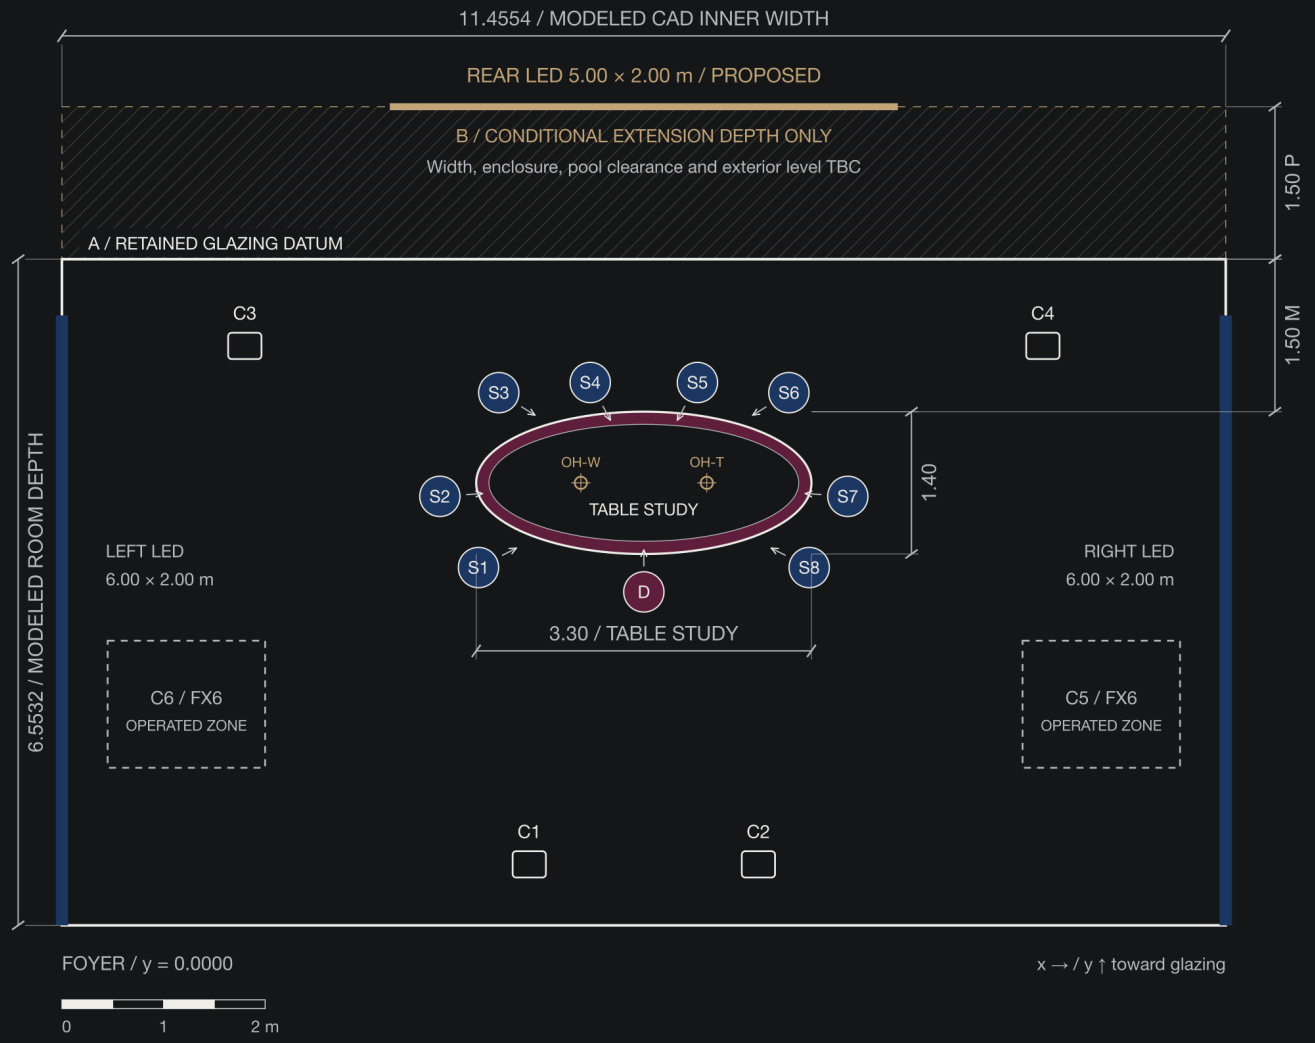

MODELED
Unsurveyed numerical geometry

PROPOSED
Study intent; not adopted

TBC
Survey / decision / engineer

Geometry before atmosphere

Plan A with conditional B overlay / units: metres / geometric scale bar governs

DOES NOT CONTROL OWNER GEOMETRY

01 / SPATIAL BASIS

Table at x 5.7277 / y 4.3532. Eight player centers + one dealer. Dealer faces +Y, toward glazing. Seat symbols are center markers, not measured chair envelopes.

02 / PROPERTY OPTIONS

A retains the existing glazing. B proposes a 1.50 m outward enclosed extension, conditional on structure, planning, pool and enclosure feasibility.

03 / DISTANCES ≠ AISLES

1.50 m rail-to-glass is a datum separation. Chairs, bodies and camera supports occupy space. No occupied clearance or egress compliance is demonstrated.

04 / NUMERICAL STUDY

Table: 3.30 × 1.40 m, MODELED. Earlier owner table: 3.00 × 1.50 m. Fabrication drawing must resolve the conflict before set-out.

05 / NOT DEPICTED AS FIT

Glazing mullions; stage perimeter; ramp; display service envelope; dinosaur / lounge / plant positions. These require measured footprints.

STATUS KEY

VERIFIED
Brief / source count only

MODELED
Numerical study; no site survey

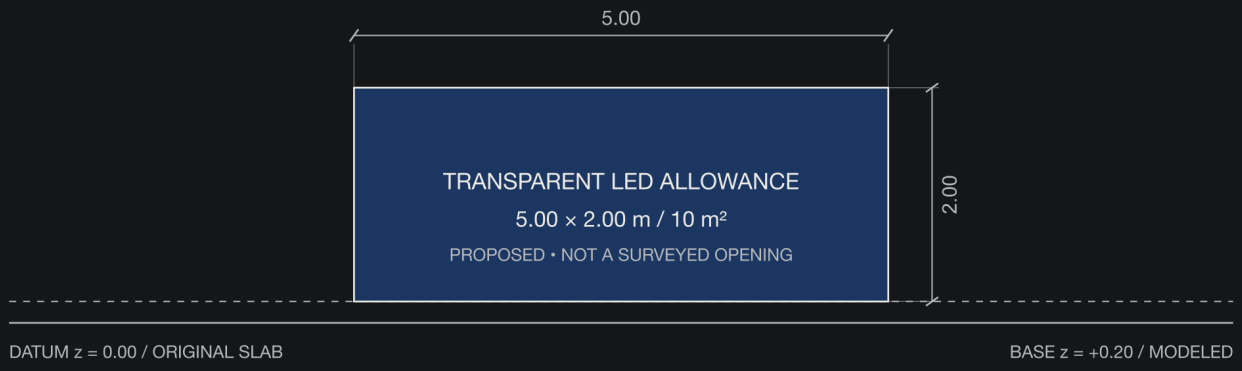

PROPOSED
Design intent, conditional

TBC
Field / supplier / engineer gate

Emitting planes and working datums

Rear elevation + transverse section / separate vertical datums / no ceiling fit claimed

E1 / REAR LED ELEVATION AT y = 8.0532

No guessed window height, mullions, facade perimeter or exterior slab.
The emitting allowance is independent of the actual clear opening and support frame.

S1 / TRANSVERSE SECTION AT y = 4.3532

Stage +0.20 m is modeled continuously here; actual perimeter, ramps and loading TBC.

DOES NOT CONTROL OWNER GEOMETRY

01 / DISPLAY QUANTITIES

Rear: 5.00 × 2.00 m = 10 m².
Two flat sides: 6.00 × 2.00 m each; 24 m² combined.
All are PROPOSED allowances.

02 / DATUM STACK

Original slab: +0.00 m.
Modeled stage: +0.20 m.
Modeled table top: +0.96 m.
Fixed lens: +1.70 m slab.
LED emitting top: +2.20 m.

03 / WHAT THIS PROVES

The declared bands and vertical relationships are numerically consistent. No exact product cabinet, transparency, daylight output or mounting fit is proven.

04 / TECHNICAL GATES

Survey clear opening + mullions.
Verify support and service depth.
Test reflections, scan / shutter, brightness, cooling and power.
Fix enclosure + exterior datum.

05 / DIAGRAM DISCIPLINE

No inferred ceiling is drawn.
No floor-to-ceiling height is used.
The section is a geometry study, not a structural detail.

STATUS KEY

VERIFIED
Brief / source count only

MODELED
Numerical study; no site survey

PROPOSED
Design intent, conditional

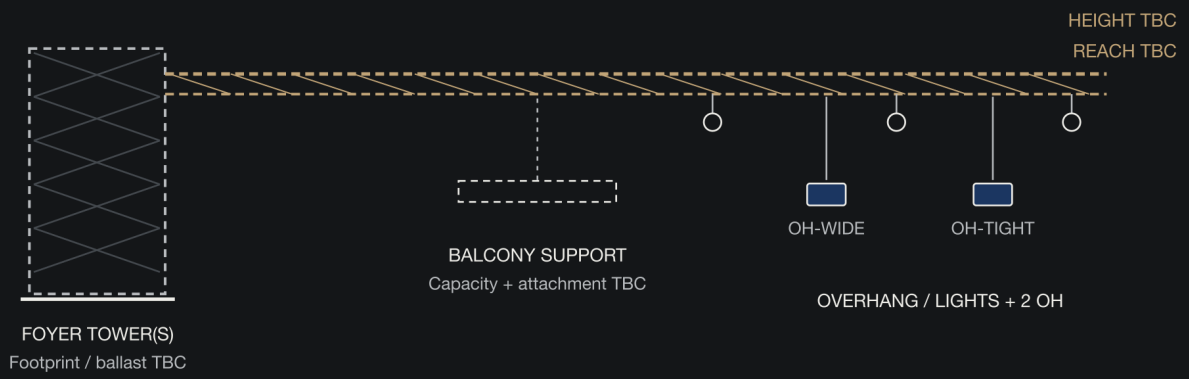

TBC
Field / supplier / engineer gate

Support intent, with the unknowns exposed

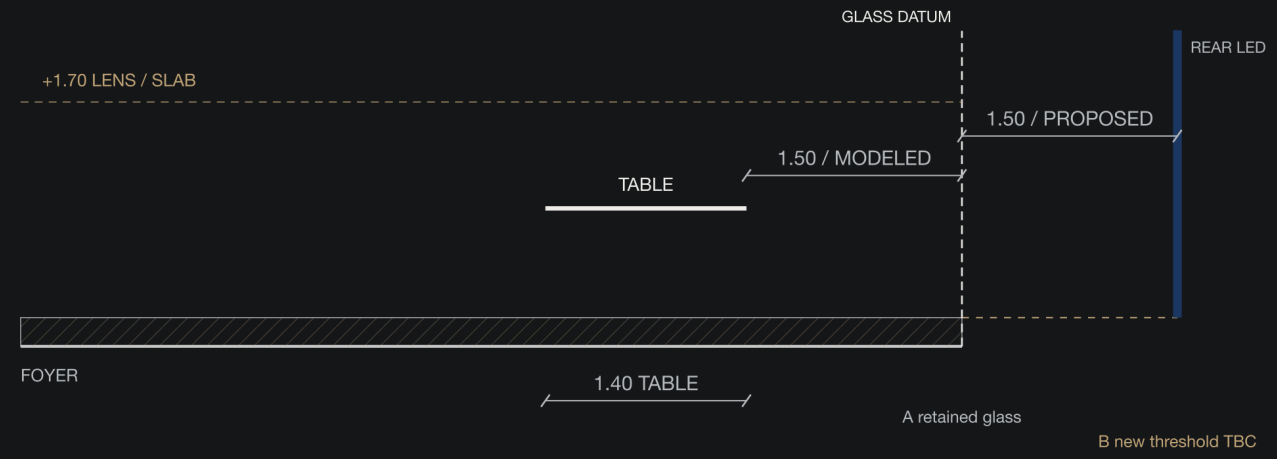

Longitudinal section + rig relationship diagram / upper schematic is deliberately not to scale

R1 / FOYER → BALCONY → TABLE OVERHANG

PROPOSED RELATIONSHIP ONLY · ENGINEER VERIFICATION REQUIRED

S2 / LOWER LONGITUDINAL SECTION AT TABLE CENTRE

DOES NOT CONTROL OWNER GEOMETRY

01 / DO NOT MEASURE THE RIG

Upper diagram shows connection intent only. It provides no tower count, span, truss section, load, fixing or cantilever approval.

02 / ACTUAL HEIGHTS NEEDED

Slab → balcony support elevation.
Balcony / glazing / ceiling survey.
Lens → truss / light clearance.
Actual camera + lamp envelopes.
Rig deflection and maintenance.

03 / ENGINEER HOLD POINT

Survey existing structure.
Design tower footprint + ballast.
Check balcony reaction capacity.
Resolve attachment permissions.
Calculate total + dynamic loads.

04 / BELOW THE BREAK

Lower geometry is MODELED at uniform metric scale. Upper rig is schematic and has no shared vertical scale. No fake ceiling dimension is introduced.

05 / STAGE ACCESS

0.20 m rise requires a resolved access / ramp / edge design.
It is not an accessibility sign-off.

STATUS KEY

VERIFIED
Brief / source count only

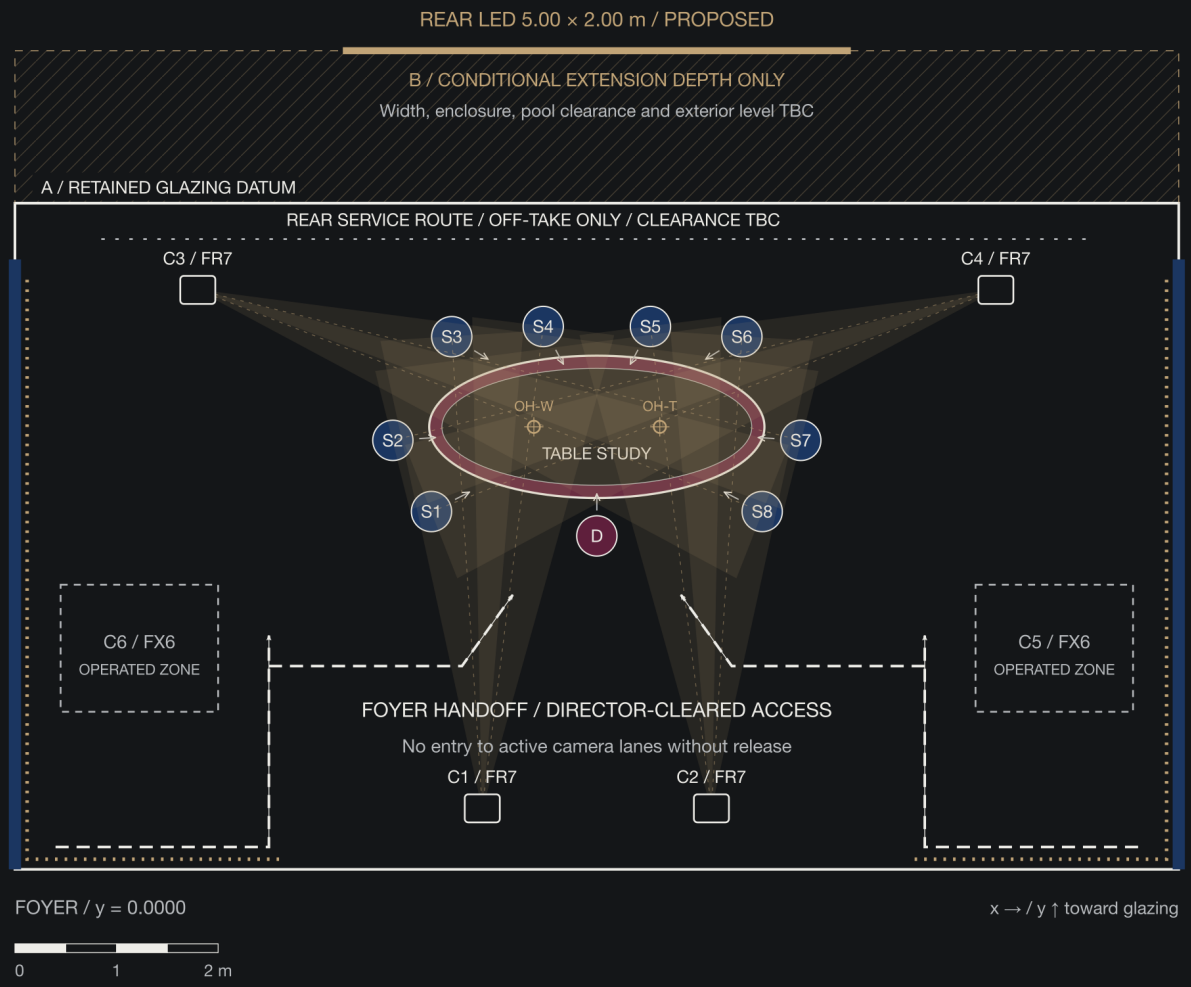

MODELED
Numerical study; no site survey

PROPOSED
Design intent, conditional

TBC
Field / supplier / engineer gate

Keep the work outside the frame

Crew circulation, cable strategy and camera lanes / spatial proposal, not clearance approval

DOES NOT CONTROL OWNER GEOMETRY

01 / VERIFIED BRIEF COUNTS

4 × Sony FR7 fixed player roles.
2 × Sony FX6 operated roles.
2 × overhead community-card camera roles; bodies TBC.

02 / ACTIVE FRAME LANES

Amber wedges show modeled 1.40 m single-player target width. They are frame-study indicators, not complete 3D keep-out volumes.
C1→S3/S4 · C2→S5/S6
C3→S7/S8 · C4→S1/S2

03 / PROPOSED CREW ROUTES

White dashed: foyer-side access. Rear service only between takes. FX6 roaming requires director release from live frames. Route widths + turning envelopes TBC.

04 / CABLE STRATEGY

Dotted perimeter runs are intent. Separate power / data as required. Use protected crossings; resolve stage penetrations + strain relief. No load schedule or route fit yet.

05 / COLOUR KEY

Amber = CAD information only. Wine #5F1F3C / Navy #1B3661 remain the declared DS anchors.

STATUS KEY

VERIFIED
Brief / source count only

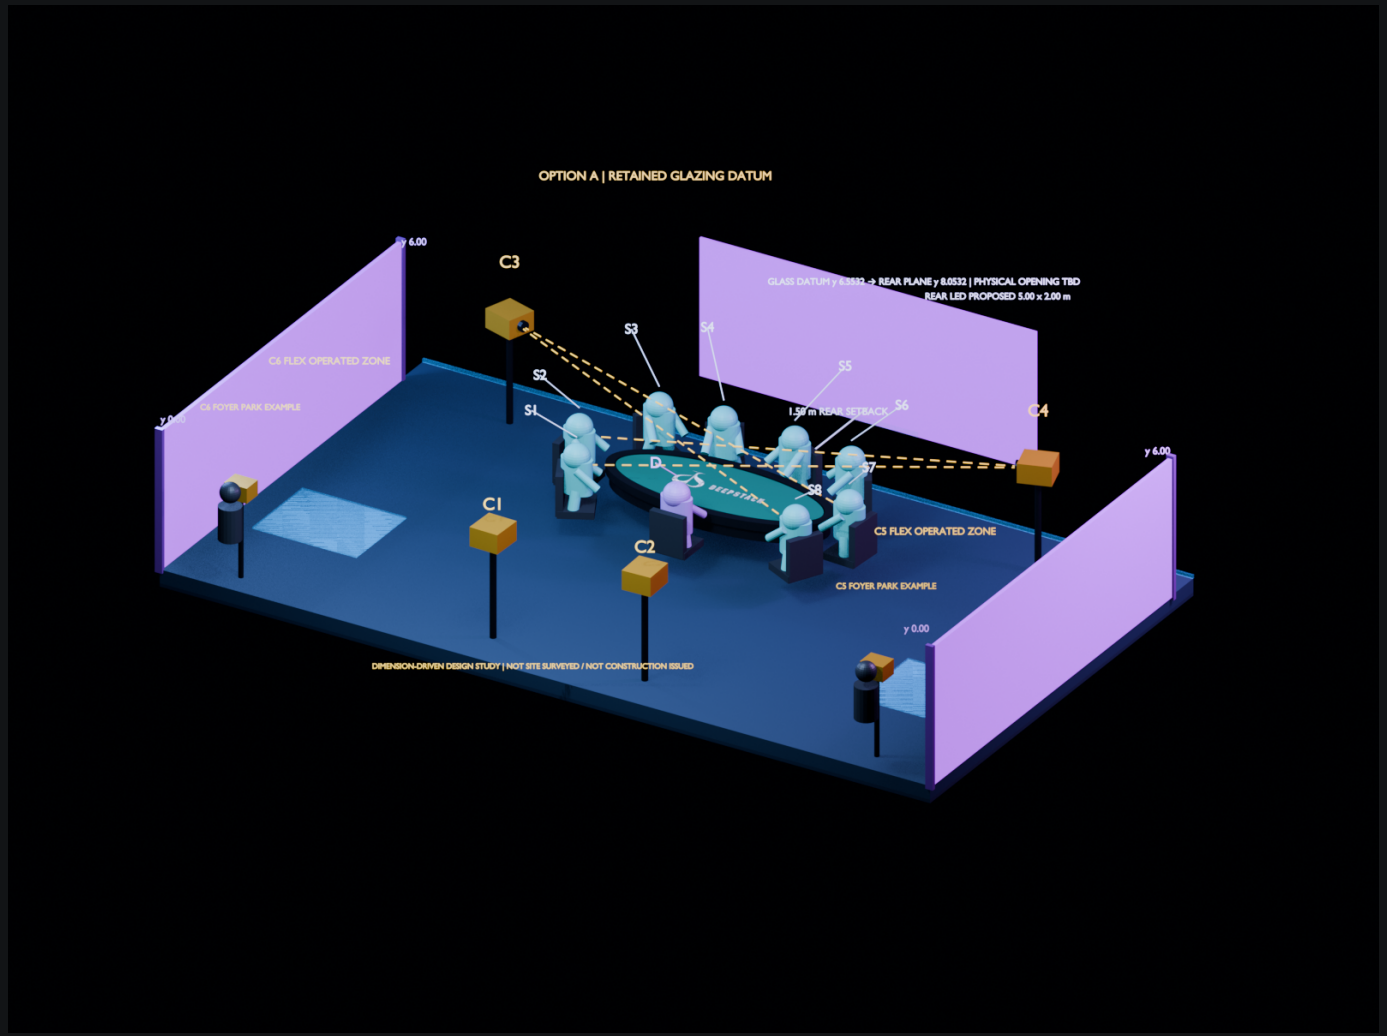

MODELED
Numerical study; no site survey

PROPOSED
Design intent, conditional

TBC
Field / supplier / engineer gate

A clean state must work without spectacle.

Use the existing metric model as the technical fallback view. A proposed show fallback removes scenic motion and preserves neutral game light.

PROPOSED CUE / F0

Hold or blank scenic content. Keep faces, cards and chips readable. Stop operated movement and park clear of the active fixed frame.

If LED artifacts or reflections remain, record the approved conventional-display / curtain fallback. Never trade game exposure for visible effects.

This clean metric view proves modeled relationships only. Product performance and show-control behavior require the real camera / processor test.

Transparent LED is not a weather enclosure. The clean technical plate is not a photometric blackout simulation.

Identity is an asset system.

Official marks, table, felt, chips and cards enter through registered source files. Brand values are exact; material and lighting variations remain documented render responses.

DEEPSTACK

WINE / #5F1F3C

NAVY / #1B3661

Supplied source lockup shown intact. Existing image pixels, purple Alcantara appearance and warm practical light are not extra brand-color tokens.

Registered table and felt remain the product authority. Final Vegas-specific chip, card and ambassador replacements are not selected. ClubWPT Gold, WPT World Championship and Wynn marks remain rights/scope gates.

Build the capital story around a proven stage.

CURRENT REVIEW recommendation: permanent-buy is the capital-stage narrative. Rental is the pilot and fallback comparison. Option B is a separate future phase.

01 / PRIMARY / PROPERTY A

Retain glazing. Translate the owner's stage language into reversible scenic, LED, camera, control and power packages. Protect real sunset and pool identity.

02 / PILOT / RENTAL

Test the offered LED, processor and intended cameras with real people, cards, chips and felt. Record day, sunset, night, low/off and clean fallback before scaling.

03 / FUTURE / PROPERTY B

A 1.50 m conditioned extension is a stretch scope. Property consent, enclosure, structure, restoration, pool/deck clearance and an installed quote are all separate gates.

What funding should buy

A reusable system with agreed ownership, maintenance, access, show-control states and measurable acceptance evidence. Supplier quotes must separate equipment, engineering, installation, commissioning and season operation.

No sponsor amount, inventory credit, exclusive rights or white-label commitment is asserted in this package. Existing management subtotals remain modeled estimates in their source register.

Review the evidence before closing the design.

The strongest deliverable today is a traceable owner-baseline package with explicit technical conflicts. The final matched 3D production model remains open.

Visual authority	Owner style lock + Guy skeleton current review retained; source hashes preserved.
Technical communication	New plan, elevation, section and circulation studies: 88/100 for drawing communication only.
Complete production visualization	Provisional 78/100. Exact table, selected geometry, real exterior and new player beauty frames are not unified in one native model.
Required next evidence	Registered room survey; table fabrication drawing; source-family decision; support engineering; occupied camera/LED trial; Vegas artwork and rights.
Release state	CURRENT REVIEW. Suitable for internal scope and design review. Held from external fundraising release, fabrication and procurement as a resolved design.

Full 100-point scorecard, RFI owners, source paths and proof limits accompany the package.
